

Honeywell Defense and Space Fact Sheet

(v.2024.09.05)

Honeywell Defense and Space provides avionics, propulsion, and services for defense and satellite applications, including components and systems that can be applied to commercial and defense applications interchangeably.

Weapons-Related Offerings¹

- Honeywell makes components or systems (primarily inertial measurement units and guidance systems) that are designed, or that undergo certification or other qualification requirements, for use on offensive missiles or munitions, and we also offer corresponding services.
- Inertial measurement units and guidance systems enable precision navigation for both commercial and military applications. For more information, see our [Honeywell Aerospace website](#). Honeywell engineers and manufactures high-performance and industry-leading inertial measurement units (IMUs) which are used on nearly every aircraft flying to navigate them to their intended destination.
- Revenue attributable to weapons-related offerings represented **less than 2%** of Honeywell's 2023 sales. Of this amount, **approximately 0.4%** of Honeywell's 2023 sales was attributable to offerings used on missiles capable of delivering nuclear payloads and corresponding services.
- Honeywell does not make chemical weapons, biological weapons, anti-personnel landmines, cluster munitions, nuclear warheads, or nuclear missiles.

Federal Solutions Business

- Honeywell's Federal Solutions business provides management services to government-owned, contractor-operated facilities, including three facilities that are part of the U.S. nuclear security complex.
 - Honeywell advises on commercial best practices in the management and operation of these facilities to ensure that they are operated in a safe and secure manner regardless of the mission they support or the products they produce.
 - Honeywell does not determine which missions will be performed at these facilities, nor do we own the products, intellectual property, policies, or funding for the mission, or the capabilities provided by these facilities.
 - We believe the Federal Solutions business's value to the global community is to help ensure the safe and secure operation and management of these facilities and the people who are employed at these locations.
- Federal Solutions revenue attributable to services provided at the three facilities represented **approximately 0.3%** of Honeywell's 2023 sales.

¹ Excludes components, systems, or services that are (i) used on defensive platforms such as directed energy systems and Iron Dome, (ii) used interchangeably on commercial applications or available through distributors or on the open market, or (iii) used on military aircraft, ships, or land-based vehicles.
